## **Project : Computer Science Job Salaries Prediction**

### **Description:**

- In our project we first imported different libraries for data wrangling and data visualizations.
- Then We performed ETL.
- Then in Data Wrangling we pre-process our data for null, duplicate and unique values.
- Then we performed data visualizations with bar plots and scatter plots
- Then we choose multi variable model for prediction
- We used SVM Classifier in this way
- Data is predicted using experience level, job\_title and company size

Also

Description of our actions and data science steps is mentioned in the Code.
